```
The present invention describes an isolated anti-CD33 antibody or its epitope-binding fragment comprising: (a) at least one complementarity-determining region (CDR); or (b) at least heavy chain variable region comprising 3 CDRs, and at least one light chain variable region, where the CDR has the ability to bind CD33. Also described: (1) an immunoconjugate comprising the antibody or its epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical composition comprising the immunoconjugate, composition of the antibody or antibody fragment is labelled; (5) inhibiting the open of antibody or antibody fragment is labelled; (5) inhibiting the open antibody or antibody fragment is labelled; (5) inhibiting the open of antibody or antibody fragment is labelled; (5) inhibiting the open of antibody or its epitope-binding fragment, and a pharmaceutical or or open or its epitope-binding fragment; (6) determining whether a biological sample contains a myelogenous cancer cell; (7) an improved antibody or its epitope-binding fragment; (6) determining whether a biological sample contains a myelogenous cancer cell; (7) an improved antibody or its epitope-binding fragment that specifically binds to CD33; (8) an isolated polymucleotide encoding a light or heavy chain of the antibody defined above or its epitope-binding fragment (10) are recombinant vector comprising the ability to bind CD33; and (13) are recombinant vector comprising the ability to bind CD33; and (13) coptaining CD33 from a biological material. The anti-CD33 antibody or its epitope-binding fragment having the ability to bind cD33; and (13) coptaining CD33 from a biological material. The anti-CD33 antibody has correct composition can be used for transiting a subject having a myeloid leukaemia, chroning myeloid leukaemia, chronic m
                                      New antibodies that bind to CD33, useful for treating a disease associated with CD33 expression, such as myelodysplastic syndrome, acute or chronic myeloid leukemia.
                                                                                                                                                                   Claim 5; SEQ ID NO 7; 124pp; English.

The antibodies of the invention are useful for diagnosing or preventing B-cell lymphoma, leukaemia or an autoimmune disease (e.g. thrombocytopenia, lupus or rheumatoid arthritis). The present amino acid sequence represents a chimeric anti-CD20 antibody
New humanized anti-CD20 monoclonal antibody (MAb) that retains ubstrantially the B-cell and B-cell lymphoma and leukemia cell targeting of the murine anti-CD20 MAb, useful for treating B-cell lymphoma, leukemia or an autoimmune diseases.

                                                                                                                                                                                                                                                                                                                                                                                                  (MAb) or its antigen-binding fragment containing the complementarity determining regions (CDRs) of at least one murine anti-CD20 Mab variable region and the framework regions (FRs) of at least one human IVIAB variable region. The antibodies of the invention are useful for diagnosing or preventing B-cell lymphoma. Jeukaemia or an autoimmune disease (e.g. thrombocytopenia, lupus or rheumatoid arthritis). The present amino acid sequence represents a chimeric anti-CD20 antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                            New humanized anti-CD20 monoclonal antibody (MAb) that retains substantially the B-cell and B-cell lymphoma and leukemia cell targeting of the murine anti-CD20 MAb, useful for treating B-cell lymphoma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                       humanised anti-CD20 monoclonal antibody; hCD20 monoclonal antibody; MAb; IV1AB variable region; B-cell lymphoma; leukaemia; autoimmune disease; thrombocytopenia; lupus; rheumatoid arthritis; heavy chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                         The invention comprises a humanised anti-CD20 (hCD20)monoclonal antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 QVQLQQPGAELVKPGASVKMSCKASGYTFTSYNMHWVKQTPGRGLEWIGAIYPGNGDTSY

(MAb)or its antigen-binding fragment containing the complementarity determining regions (CDRs) of at least one murine anti-CD20 Mab variable region and the framework regions (FRs) of at least one human IVIAB variable region. The antibodies of the invention are useful for diagnosing or preventing B-cell lymphoma, leukaemia or an autoimmune grease (e.g. thrombocytopenia, lupus or rheumatoid arthritis). The present amino acid sequence represents a mouse anti-CD20 antibody variable heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         QKFQGKATLTADKSSTTAYMQLSSLTSEDSAVYYCAREVRLR---YFDVWGQGTTVTVSS 118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel re-engineered or framework (FR)-patched immunoglobulin, containing the heavy and/or light chain variable region (WH/WL) sequences from a parent antibody. Within these chains, at least cone of the compartmentalised framework sequences, defined as FR1, FR2, FR3 and FR4 are replaced, or patched, by the corresponding framework sequences from the heavy and light chain immunoglobulin region of a different species. The FR-patched immunoglobulin binds specifically to an artigen with affinity comparable to, or within 3-fold of, that of the parent immunoglobulin. The invention discloses the process of FR-patching which is used to generate re-engineered immunoglobulin chains having one or more complementarity determining regions (CDK's) from a donor immunoglobulin and portions of framework sequences from one or more human or portions of framework sequences from or or more human or portions of framework sequences from or or more complementarity determining regions (CDK's) from a donor immunoglobulin and portions of framework sequences from or or more complementarity determining regions (CDK's) from a donor complementarity as well as reduced or eliminated immunogenicity, whilst maintaining the specificity and affinity of the parent antibody. The FR-patched immunoglobulin is useful during the preparation of a composition of the treatment of rheumatoid arthritis. Furthermore, the molecules of the invention may also prove useful in gene therapy. The current sequence is that of the murine anti-CDSO antibody, 1F5, WH protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         116
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                               New re-engineered or framework-patched immunoglobulin, useful for preparing a composition for treating cancer, preferably Non-Hodgkin's lymphoma or rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           QVQLQQPGAEVVKPGASVKMSCKASGYTFTSYYIHWIKQTPGQGLEWVGVIYPGNDDISY

                                                ABJ39009
                                                                                             The present sequence represents a fusion of an anti-CD20 single chain antibody (B9EB) streptavidin. The fusion protein is expressed using vectors of the invention. The specification describes vector constructs for expressing streptavidin fusion proteins. The vector comprises a nucleic acid encoding streptavidin or its functional variant operatively linked to a promoter, and a cloning site for insertion of a second nucleic acid sequence encoding a polypeptide to be fused with streptavidin, interposed between the promoter and the first nucleic acid sequence. Alternatively, the vector construct comprises a nucleic acid, operatively linked to a promoter, encoding a polypeptide to be fused with streptavidin, and a cloning site for insertion of a second nucleic acid, operatively linked to a promoter, encoding a polypeptide to be fused with streptavidin, and a cloning site for insertion of a second nucleic acid, caricalar. The fusion proteins are useful for targeting tumour cells associated with cancer, e.g. adenocarcinomas or hematological malignancies. The vector construct is useful for expressing of streptavidin fusion proteins. In particular, these are useful as tools for medical diagnostics and therapequeic purposes, e.g. for detecting the presence or absence of, or treating, a target site within a mammalian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New vector constructs for expressing genomic streptavidin fusion proteins which are useful for targeting tumor cells associated with cancer, e.g.

This invention relates to novel vector constructs for the expression of streptavidin fusion proteins. Streptavidin (SA) is produced by Streptavidin fusion proteins. Streptavidin (SA) is produced by vectors avidinia and specifically binds water-soluble biotin. The vectors comprise a nucleic acid sequence encoding streptavidin, a promoter operatively linked to the nucleic acid sequence and a cloning site for insertion of a second nucleic acid sequence encoding an antience of the antigen binding fragment. The fusion proteins encoded are known as single chain antibody-genomic streptavidin fusion proteins (scFvSA). The vectors may have cytostatic activity when used in streptavidin fusion cassettes. The fusion proteins may be used as diagnostic markers or as cell-specific targeting agents. These may also be used in treating tumours. The present sequence is the amino acid sequence of the BPS9 single chain antibody-genomic streptavidin fusion
                                                                                                                                                                                                                                                                                                                                                             New vector construct for expressing genomic streptavidin fusion proteins useful as diagnostic markers or as cell-specific targeting agents.
                                                                                       Schultz JE, Lin Y, Sanderson JA, Reno JM;

                                                                                                                                                                                                                                                                                                                                                                                                            remodeling; glycoconjugation; glycosyltransferase; glycan; CD20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a cell-free, in vitro method of remodeling a peptide. The method involves removing a saccharyl subunit from the peptide, thus forming a truncated glycan, and contacting the truncated glycan with at least one glycosyltransferase and at least one glycosyl donor to the truncated glycan, thus remodeling the peptide. Conjugates can be formed between a granulocyte colony stimulating factor (G-CSF) peptide, interferon alpha peptide, interferon beta peptide, Factor VI a peptide, follicle stimulating hormone peptide, erythropoietin (EPO) peptide, granulocyte macrophage colony stimulating factor (G-CSF) peptide, peptide, granulocyte macrophage colony stimulating factor (G-CSF) peptide, interferon-gamma peptide, alpha-1-protease inhibitor (A-1-PI)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Remodeling a peptide, by removing a saccharyl subunit from the peptide form truncated glycan, and adding or deleting glycosyl groups to a peptide and/or adding modifying group of a peptide to remodel the

The invention relates to an improved method for treating B cell lymphoma comprising administering an anti-CD20 antibody. The improvement comprises administering at least one chemotherapeutic agent. The antibody causes a substantial depletion of peripheral B cells. The antibody is chimeric anti-CD20 or C2B8. The method is useful for treating B cell lymphoma. This sequence represents a murine immunoglobulin heavy chain variable region used in the method of the invention.
bonded to the N-acetylglucosamine residue at the reducing end of the usugar chain. The calls are used in the treatment and prevention of cancer and immune disorders. This sequence corresponds to a protein used in the method of the invention.

                                   The present invention relates to a method for treating B cell lymphoma. The method comprises administering at a first administration period, an immunologically active, mouse/human chimeric anti-CD20 antibody and/or administering, at a second administration period, a radiolabelled anti-CD20 antibody, to the human subject. The invention also discloses expression vectors that may be used in the method of the present invention. The method is useful for treating B cell lymphoma in humans. The present sequence represents murine anti-CD20 antibody heavy chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to cells producing an antibody molecule specifically binding to CD20 are new, in which the antibody contains N-glycoside bond complex sugar chains bonded to the Fc region of the antibody peptide chains, of which less than 20% have a fucose residue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antibody binding to CD20 and having Fc-bound sugar chains of low fucose content for treatment of cancer and immune disorders.

modifying enzyme activity. The enzyme activity of binding the 1-position of fucose to the 6-position of an N-acetylglucosamine at the reducing end of a complex N-glycoside linked sugar chain via an alpha-bond is absent or less than in the parent cell. The sugar chain modifying enzyme is preferably alpha 1,6-fucosyltransferase (ADE73052-ADE73053 and ADE73055-ADE73055). The invention is useful for the treatment and prevention of tumours, allergy, inflammation, autoimmune disease, criculatory disorders, and viral and bacterial infection. The present sequence was

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -I- MISCELLANEOUS: The sequences of 10 hybridoma proteins that also bind dextran differ from that shown at 1-7 positions, many of which occur in the D and J segments.
-I- MISCELLANEOUS: This protein binds dextran.
-I- SIMILARITY: Contains 1 Ig-like (immunoglobulin-like) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE-80078170; PubMed-6765983;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 6, P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 12. Application US/08860174A

Patent No. 59898130

GENERAL INFORMATION:
APPLICANT: DAVIS, Paul James
APPLICANT: VAN DER LOGT, Cornelis Paul Erik
APPLICANT: VERHOEIJEN, Martine Elisa
APPLICANT: WILSON, Steve
TITLE OF INVENTION: ANTIBODY FRAGMENT ANALOGUE
NUMBER OF SEQUENCES: 31
CORRESPONDENCE ADDRESS:
ADDRESSEE: PILLESURY, MADISON & SUTRO LLP
STREET: 1100 New York Avenue, N.W.
                                                                                                                                                                                            APPLICANT: DANIS, Paul James
APPLICANT: DANIS, Paul James

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                US-10-700-632-9
